/note="Vector: lambda pSB; Site_1: BamHI; Site_2: EcoRI;
First strand cDNA was primed with an anchored
XhoI-oligo(dT) primer [5'GRAGGAGTCGAGCGCGCAGGAGGAGGA(T) VN
3'; V=A,C,G; N=A,C,G,T] and then dG tailed. Second strand
was primed with a BamHI-dC primer
[5'AGAGAGCTCGAGTCGCGCGCGCAATAATAATAAT(C) 3'].
Double-stranded cDNA was then digested with BamHI and XhoI
and directionally cloned into the BamHI and SalI sites of
lambda pSB vector. Library was constructed by Wei Yu at RIKEN
of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T,
Itoh M, Nagaoka S, SasakiN, Okazaki Y, Muramatsu M,
Schneider C, Hayashizaki Y, High efficiency selection of
full-length cDNA by improved biotinylated cap trapper.,
DNA Res 4: 1, 61-6, Feb 28, 1997)"

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                     CC NIDD (NGFR-interacting Death Domain), with a candidate binding agent and cetecting the association of the domain and the candidate binding agent, compared to by yeast two hybrid assay, immunoprecipitation, SPA, untraviolet (UV) or chemical crosslinking, nuclear magnetic resonance (NMR), mass cete spectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell communoglobulin class switching, in particular apoptosis within a cell. CC munidarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC munidarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC munidarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC invention is useful for modulating the activity of oncogenic proteins, CC for treating a pathology caused by the oncogenic proteins, CC for treating bacterial infections by modulating the activity of bacterial CC proteins. The protein and antibody specific for it are useful for CC discovery of drugs that suppress infection, inflammation, allergy, csepsis, autoimmunity, allograft rejection and other diseases. The protein is useful for treating immune-based pathologies, pathologies associated conthinating the cross host diseases such as sepsis, fibrosis, carthritis, graft versus bost diseases fine invention is used in antisense therefore the protein and the cross host diseases and content can be protein and the cross host diseases and content and antisense therefore a content according to the content can be content and antisense therefore a content and antisense content according to the content can be content and antisense content according to the content and antisense content according 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated polypeptide comprising a death domain (DD), death effector domain CD or NB-ARC domain. The invention is useful for identifying a binding agent, preferably a protein or a drug that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NB-NBC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NB-NBC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation allergy, sepsis, autoimmunity, allograft rejection and other disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                      polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in discretize forencies cape marking identification of mutations.
                                                                                                          diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-MAR-2000; 2000US-0540217.

             The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 end sequence and an oligonucleotide comprises a 3 end sequence complementary to a polynucleotide which comprises a 5 end sequence and sequence which comprises a 5 end sequence complementary to a polynucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in the specification. The primer sets can be used in antisense therapy and the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ota T,

The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the protein and acid sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAA09310-20 are novel genes isolated by SEREX screening from a renal cancer cell line 1973/10.4. The genes encode cancer associated antigen precursors. These gene products are useful in methods for preventing, diagnosing and/or treating disorders, especially cancer, associated with abnormal expression of human cancer associated antigens. The method comprises contacting a sample from a subject with an agent that specifically binds to the nucleic acid molecule or expression product (or fragment) complexed with a human leukocyte antigen (HLA) molecule and determining the interaction between the agent and the nucleic acid molecule or the expression product as a determination of the disorder.

```
CC inhibitors are useful for treating inflammatory diseases such as CC pulmonary diseases and diseases of the airway (e.g., adult respiratory CC disease syndrome (ARDS), chronic obstructive pulmonary disease (OPD), CC pulmonary fibrosis, interstitial lung disease, asthma, chronic cough CC or allergic rhinitis), transplant rejection, autoimmune diseases (e.g., CC rheumatoid arthritis, systemic lugus erythematosus, multiple sclerosis or diabetes), cancer (e.g., solid tumours, skin cancer or lymphoma), CC cardiovascular diseases (e.g., stroke and atherosclerosis), diseases (c.g., stroke and atherosclerosis), diseases (c.g., fihe central mervous system (e.g., neurodegenerative disease), CD14 mediated sepsis, non-CD14 mediated sepsis, osteoparthritis, osteoporosis, CC dermatitis), inflammatory bowel disease (e.g., Crohn's disease and CC dermatitie), inflammatory bowel disease (e.g., Crohn's disease and CC dermatitis), Behcet's syndrome, ankylosing spondylitis, gout, CC sarcoidosis and ophthalmic diseases and conditions. The inhibitors of CC resulting from the activation of an interleukin-1 receptor (IL-IR)/Toll CC receptor in a cell. They also inhibit the activation of a transcription CC factor that activates NFkappaB in the cell. IRAK-4 is used to create a CC for IRAK-4 in vivo, to generate models for the study of inflammatory CC disorders and conditions and for the development of potential treatments for IRAK-4 in vivo, to generate models for the study of inflammatory treatments and conditions. IRAK-4 sequences of the study of inflammatory diseases and conditions. IRAK-4 sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and other receptors and act to transduce signals originating from the activated receptors, ultimately leading to a variety of downstream effects such as nuclear factor (NF)-kappaB activation. The IRAK-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel human interleukin-1 receptor associated kinase polypeptide, useful for identifying modulators of the polypeptide for treating asthma, allergic rhinitis, multiple sclerosis and skin cancer -

                                                                                             CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC MIDD (NGFR-interacting Death Domain), with a candidate binding agent and detecting the association of the domain and the candidate binding agent and CC by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (TV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass CC spectroscopy (MS) and FPA. The invention is useful for modulating the clevel of a cell process such as cell proliferation, cell adhesion, cell elvel of a cell process such as cell proliferation and B cell communoglobulin class switching, in particular apoptosis within a cell communoglobulin class switching, in particular apoptosis within a cell communoglobulin class switching, in particular apoptosis within a cell communidation, c. pneumoniae, and C. psittaci or a nucleic acid encoding the CTDD DD protein is useful for detecting a Chlamydia infection. The class switching the activity of oncogenic proteins, cc for treating bacterial infections by modulating the activity of bacterial proteins. The protein and antibody specific for it are useful for classovery of drugs that suppress infection, and other diseases. The protein and contact contact and conta
                                                                                                                                                     sepsis, autoimmunity, allograft rejection and other diseases. The protein is useful for treating immune-based pathologies, pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, arthritis, graft versus host disease. The invention is used in antisense
                                                                                          Sequence
                                                                                                                                         therapy and gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated polypeptide comprising a death domain (DD), death effector domain (DED) or NB-ARC domain. The inve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 19; Page 180-182; 209pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Reed JC, Godzi

                                                                         polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in distance in the content of the content
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and
                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The

                                  The invention relates to an isolated polypeptide comprising a death CCC domain (DED) or NB-ARC domain. The invention consists and isolated polypeptide comprising a death CCC domain for identifying a binding agent, preferably a protein or a drug CCC that binds a DD, DED or NB-ARC domain. By contacting a DD, DED or NB-ARC CCC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or NIDD (NGFR-interacting Death Domain), with a candidate binding agent, DED4 or NIDD (NGFR-interacting Death Domain), with a candidate binding agent and CC detecting the association of the domain and the candidate binding agent compared two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass cc level of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell compared to facely specifically reactive with CTDD DD of C. trachomatis, C. CC compared to microbial infection and B cell convention is useful for modularing the activity of oncogenic proteins, cell convention is useful for detecting a Chlamydia infection. The CC convention is useful for modularing the activity of nocogenic proteins, cell convention. The protein and antibody specific for it are useful for creating bacterial infections by modularing the activity of bacterial convention. The protein and antibody specific for it are useful for cell division, inflammatory diseases such as sepsis. The protein cell convention, allergy, and gene therapy. The present sequence is human IRAK4 gene.

CC arthritis, graft versus host disease. The invention is used in antisense convention is used in antisense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 19; Page 194-196; 209pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polynucleotide hybridised to (III) in the sample and comparing the amount of polynucleotide to a predetermined cut-off value and thereby determining cancer in a patient. (I), (II) or antigen-presenting cells expressing (II) is useful for stimulating and/or expanding T cells specific for a tumour protein. The method comprises contacting T cells with one of the components under conditions to permit the stimulation and/or expansion of the cells. A composition comprising (I) is useful for stimulating an immune response in a patient and for inhibiting the development of a cancer especially lung cancer in a patient. An isolated T cell population is useful for removing tumour cells from the biological sample and for inhibiting the development of cancer in a patient. AASG180-AASG1874 represent over human lung small cell cancer in the cancer and for inhibiting the development of cancer in a patient.

Novel human interleukin-1 receptor associated kinase polypeptide, useful for identifying modulators of the polypeptide for treating gout, asthma, allergic rhinitis, multiple sclerosis and skin cancer -

Claim 26; Fig 4; 89pp; English.

CC The present sequence is a cDNA encoding mouse interleukin (IL)-1 receptor CC associated kinase (IRAK)-4. IRAK associate with activated IL-1, IL-18 CC and other receptors and act to transduce signals originating from the CC effects such as nuclear factor (NP)-kappaB activation. The IRAK-4 CC inhibitors are useful for treating inflammatory diseases such as CC pulmonary diseases and diseases of the airway (e.g., adult respiratory CC disease syndrome (ARDS), chronic obstructive pulmonary disease (OPD), CC pulmonary fibrosis, interstitial lung disease, asthma, chronic cough CC or allergic rhinitis), transplant rejection, autoimmune diseases (e.g., CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis CC or diabetes), cancer (e.g., solid tumours, skin cancer or lymphoma), CC cardiovascular diseases (e.g., stroke and atherosclerosis), diseases CC of the central nervous system (e.g., neurodegenerative disease), CD14 cardiovascular diseases of the skin (e.g., rash, contact dermatitis, atopic CC dermatitis), inflammatory bowel disease (e.g., Crohn's disease and CC dermatitis), inflammatory bowel disease (e.g., Crohn's disease and CC dermatiting from the activation of an interleukin-1 receptor (IL-IR)/Toll receptor in a cell. They also inhibit the activation of a transcription CC resulting from the activation of an interleukin-1 receptor (IL-IR)/Toll receptor in a cell. They also inhibit the activation of a transcription of activation and for the study of inflammatory disease and CC disorders and conditions and for the development of potential treatments CC disorders and conditions and for the development of potential treatments CC are also used in gene therapy and in antisense therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                  222222222222222222222222222222
                                                                                                                                                                                                                                                                                                                                                                                                                                             CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC detecting the association of the domain and the candidate binding agent, CC by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass CC spectroscopy (MS) and FPA. The invention is useful for modulating the communoglobulin class switching, in particular apoptosis within a cell immunoglobulin class switching, in particular apoptosis within a cell cimmunoglobulin class switching, in particular apoptosis within a cell. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the crown of protein is useful for modulating the activity of noncogenic proteins, CC convention is useful for modulating the activity of noncogenic proteins, The cc invention is useful for modulating the activity of noncogenic proteins, CC for treating bacterial infections by modulating the activity of bacterial corrections. The protein and antibody specific for it are useful for cc discovery of drugs that suppress infection, inflammation, allergy, cathologies, autoimmunity, allograft rejection and other diseases. The protein cc is useful for treating immune-based pathologies, pathologies associated contributes, graft versus host diseases such as sepsis, fibrosis, therapy and gene therapy. The present sequence is human IRAK4 DD cDNA.

AAA16683 ID AAA:

AAA16683 standard; cDNA; 5170

AAA16683;

16-JUN-2000 (first entry)

Human secreted protein clone nf56_3 nucleotide sequence SEQ ID NO:131.

infection; HIV; hepatitis; malaria; autoimmune disorder; systemic lupus; connective tissue disease; multiple sclerosis; erythematosis; rhoumatoid arthritis; autoimmune pulmonary inflammation; asthma; Guillain-Barre syndrome; autoimmune thyroiditis; myasthenia gravis; insulin dependent diabets mellitus; graft-versus-host-disease; autoimmune inflammatory eye disease; allergy; ss. antibacterial; antifungal; cytostatic; antiinflammatory; dermatological; antidiabetic; antiasthmatic; antiarthritic; antirheumatic; protozoacide; antithyroid; immune deficiency; severe combined immunedeficiency; SCID; Human; secreted protein; immunestimulant; immunesuppressant; virucide;

invention relates to an isolated polypeptide comprising a death

WO200009552-A1

```
CC AAY94980 to AAX94980, isolated from human adult brain, adult thyroid, CC adult retina, foetal carcinoma, adult blood, adult neural, foetal kidney, CC adult placenta, adult testis, whole embryo, adult cartilage, kidney, CC adult placenta, adult thymus, foetal placenta, adult uterus, adult turous, adult thymus, foetal placenta, adult turous, adult thomour, CC and adult bladder, cDNA libraries. The polynucleotides and proteins are predicted to have biological activities which would make them suitable CC for treating, preventing or ameliorating medical conditions in humans are considered to have biological activities which would make them suitable CC and adult bladder, cDNA libraries. The polynucleotides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight CC markers on Southern gels, and as chromosome markers or tags to identify concentration of immune deficiencies and disorders, such as severe combined CC immunedeficiency (SCID), as well as viral, bacterial, fungal and other infections. These infections include human immunodeficiency virus (HIV), CC candidiasis. The proteins can be used to treat autoimmune disorders such as connective tissue disease, multiple sclerosis, systemic lupus crythematosis, rheumatoid arthritis, autoimmune pulmonary inflammation, dislan-Barre syndrome, autoimmune thyroiditis, insulin dependent and arabitan arabitan arabitan arafilatis, autoimmune decleaned.
                                                                                                                                                                Query Match:

RESULT 13
ABQ81849
                                                                                           CC Sequences given in ABQ81843 and ABQ81843, or a sequence sqiven in CC (C least 90% identity or which hybridises with the sequence given in ABQ81842 and ABQ81843 as with the sequences given in CC ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding CC a fusion protein, comprissing a sequence selected from 1097 sequences CC given in ABP65258 to ABP66354 ligated in frame to a polynucleotide (C antibacterial activities, and can be used as an inhibitor of Salmonella. (C (I) (which is a probe) is useful for the detection and/or identification CC of Bifidobacterium longum in a biological sample. A carrier containing CC the lactic acid bacterium sliftdobacterium longum NCC2705 (CNM 1-2618) (C can be used for preventing and/or treating diarrhoea brought about by CC pathogenic bacteria and/or rotavirus. The carrier is a food composition CC selected from milk, yogurt, curd, cheese, farmented milks, milk based CC fermented products, ice-creams, fermented cereal based products, milk based conders, infant formula, pet food or a pharmaceutical composition CC supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the C expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent CC listing from the present invention but not mentioned further within the constraint of the products of the Bifidobacterium but not mentioned further within the
   N.B. The sequence data for specification but is based
                                                                                specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polynucleotide comprising Bifidobacterium genome sequence useful as a probe or primer for detecting and/or identifying Bifidobacterium longum in a biological sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bifidobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequence of a Bifidobacterium genome selected from the nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; SEQ ID 1105; 80pp; English

                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alignment
                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABC07737-ABB72072).
                     The sequence data for this patent did not form specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   seq length:

Sequence 1, Application US/09009119

Patent No. 6160206

GENERAL INFORMATION:

APPLICANT: SATO, Ryo

APPLICANT: BOYNTON, John E.

TITLE OF INVENTION: Porphyrin Accumulating-Type Herbicide Res.

FILE REFERENCE: substitute sequence listing

CURRENT APPLICATION NUMBER: US/09/009,119

CURRENT FILING DATE: 1998-01-20

NUMBER OF SEQ ID NOS: 1

SOPTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       멍
